Engage

Investigate: Steam and Ice

1. Observe the setup of the apparatus at your lab table. Discuss your observations with your group.
2. Discuss the following questions in your group and record in the space below.
 - Describe your observations.
 - What is a reasonable explanation for your observation?
 - What are the similarities and differences between evaporation and boiling?
 - What are the similarities and differences between freezing and melting?
 - What is the relation between boiling temperature and condensation temperature?
 - What kind of change did you observe? How do you know?
